

Help content

Step 1: Right Click on My Computer and click on properties.

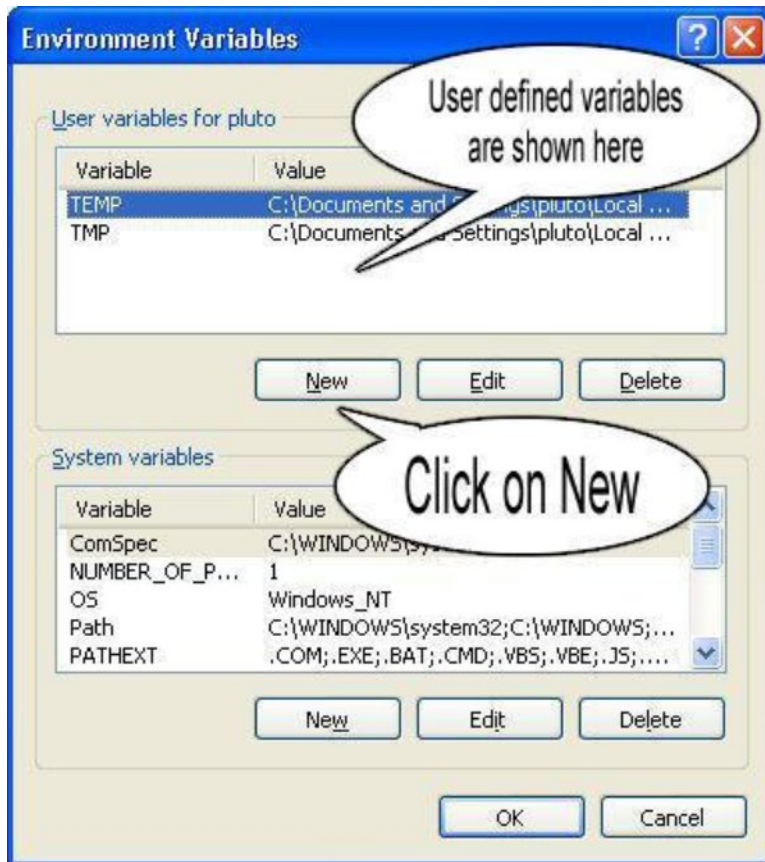

Step 2: Click on Advanced tab

Step 3: Click on Environment Variables

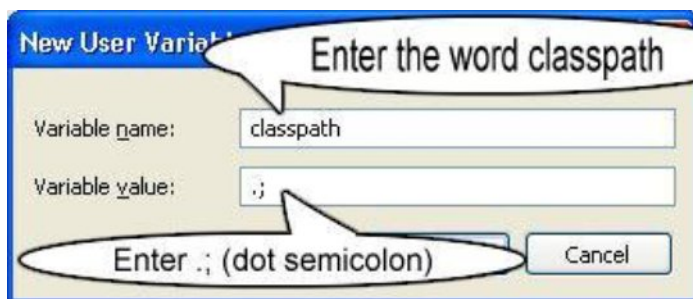

Step 4: Create a new class path for JAVA_HOME

Step 5: Enter the Variable name as JAVA_HOME and the value to your jdk bin path ie c:\Programfiles\Java\jdk-1.6\bin and

NOTE Make sure u start with .; in the Value, so that it doesn't corrupt the other environment variables which is already set.

Step 6: Follow the Above step and edit the Path in System Variables add the following; c:\Program files\Java\jdk-1.6\bin in the value column.

Step 7: You are done setting up your environment variables for your Java, In order to test it go to command prompt and type

`java`

who will get a list of help document?

In order make sure whether compiler is setup Type in cmd

`javac`

who will get a list related to `javac`
